INTERNAL MAX CONTACT PULLING TOOLS

PRODUCT OVERVIEW

The Internal Max Contact Pulling Tool (IMCPT) has been designed to engage into bespoke and industry standard internal GS fishing necks and comes in a range of sizes from 1-1/4" – 7" for use within 2 3/8" tubing up to 9 5/8" casing.

The robust design and heavy duty core combined with latch finger full circumference contact offers a significant increase in strength over conventional industry pulling tools and eliminates potential damage often observed on standard pulling tool components or the fish neck of the tool being retrieved.

In cases where the fish neck proves problematic to latch due to damage or scale build up, the IMCPT latch finger can be replaced with a slip assembly to further increase the likelihood of latching and retrieval.

The tool is supplied with a Double Jar Down Adaptor (DJDA) as standard which eliminates the potential for premature shearing of the tool during prolonged or severe downward jarring when latching into a fish neck.

Subsequent upward jarring can also be applied indefinitely or until the tool

being retrieved is released. This upward action merely shears the shear pin in the DJDA mechanism to allow the tool to transfer into the pre-release position. Further downward jarring will then shear the release pin, allowing retrieval of the IMCPT from the fishing neck.

Where having to apply upward jarring is not operationally required, the IMCPT can also be configured with a Standard Jar Down Adaptor (SJDA) which ensures the IMCPT can latch and then release from the fish neck with downward jarring only.

Job specific threaded cores can be supplied to suit operations whereby equalising prongs and running/pulling probes are required to be run.

With its interchangeable latch fingers and option to configure set up with either a DJDA or SJDA, the IMCPT ensures a cost saving by reducing stock requirements.

FEATURES BENEFITS

- High tensile / yield design
- Interchangeable components for reduced stock
- Latch finger or slip arrangement
- Increased fish neck contact
- Full range of size ranges available
- Field redressable
- No special tools required for disassembly or assembly
- Supplied with any industry connection
- Sale and rental options available
