

## RELEASABLE OVERSHOTS

### PRODUCT OVERVIEW

The Wellvene Releasable Overshot has been designed with an adjustable core to allow for varying reach configurations when latching onto tools with damaged or no external fishing neck.

Each Overshot comes with a range of interchangeable slip sizes and optional integrated bell guides to allow for use within 2 3/8" tubing up to 9 5/8" casing. The allowance for ensuring the tool has multiple configurations to suit a range of operational requirements ensures a reduction in stock is maintained whilst providing cost efficiency.

The Releasable Overshot only requires downward jarring to shear the release pin, however a Double Jar Down Adaptor (DJDA) can be supplied where there may be a requirement to eliminate the potential for premature shearing of the tool during prolonged or severe downward jarring when latching onto a fish neck or tool body.

Subsequent upward jarring can also be applied indefinitely or until the tool being retrieved is released. This upward action merely shears the shear pin in the DJDA mechanism to allow the tool to transfer into the pre-release position. Further downward jarring will shear the release pin, allowing retrieval of the Overshot from the fishing neck.

Where extended reach may be required, Bell Guide Extensions c/w Slip Extensions can be supplied to suit such operations. Additionally, the Core Adjuster can also be supplied with a thread in the bottom to accommodate equalizing prongs and pulling probes.

### FEATURES BENEFITS

- High tensile / yield design
- Interchangeable components for reduced stock
- Full range of size ranges available
- Utilize various slip sizes within the same tool
- Adjustable and extended reach
- Integrated bell guide
- Field redressable
- No special tools required for disassembling or assembly
- Supplied with any industry connection
- Sale and rental options available
