

Adjustable Scale Planer

The Adjustable Scale Planer offers a mechanical means of clearing severe scale and debris from the tubing wall or completion assemblies to support wellbore access.

DESCRIPTION

Available to suit a range of tubing sizes, the tool is set to a specific diameter larger than the previously known drift diameter and worked through using mechanical means until any scale / debris built up areas within the tubing wall are clear for further access.

Fully adjustable, the WellRASP OD can be increased as progress is made, allowing for a fully tailored scale remediation tool on-site.

FEATURES

- Anti-lock
- Adjustable range within each tubing size
- 360° teeth coverage
- Option to add sample capture
- Angled teeth for well exit (no square shoulders)
