

Back Pressure Valve

The Wellvene Back Pressure Valve provides a spring loaded pump through device that regulates fluid flow and maintains pressure integrity within the well.

DESCRIPTION

The Wellvene Back Pressure Valve (BPV) is designed to hold pressure from below while enabling fluids to be pumped from above, as may be required for well-control purposes. The BPV can be supplied with a Wellvene Hanger Plug, or it can be connected directly to any OEM Plug.

BENEFITS

- Compact design suits low rig-up heights
- Multiple seal backup features
- Can be adapted and supplied with prong for testing of the tubing hanger and production xmas tree
- Dual equalising methods suitable for various operating conditions
