

HD Max Contact Pulling Tool

The Wellvene 3.250" HD-Max Contact Pulling Tool (MCPT) Package has been designed to minimise inventory with a single HD Pulling Tool that covers multiple fish neck sizes.

DESCRIPTION

This highly-adaptable tool can be easily configured to ensure compatibility with varying lengths of fish necks regardless of connection size and type.

- Significant increase in strength over conventional industry pulling tools
- Wide range of sizes for use within 2 3/8" tubing up to 9 5/8" casing
- Interchangeable components for reduced stock and cost
- No special tools are required for disassembling or assembly

FEATURES

- High tensile/yield design
- Range of latch sub-assemblies to suit fish necks from 1.000" to 2.375"
- Variable reach
- Includes bell guide as standard
- Field redressable
- Provided with any industry connection
- Sale and rental options are available

HD Max Contact Pulling Tool

CONFIGURATIONS

The package offers a **Standard Jar Down Top Sub (JDTS)** for conventional jar down to release and a **Dual Jar Down Adaptor (DJDA)** for operations that require repetitive downward jar action without prematurely shearing the release pin.

With the DJDA installed onto the MCPT, should there be a requirement to release the tool, upward jar action is applied to shear the upper pin within DJDA, allowing subsequent downward jar action to shear the lower pin and release the MCPT.

Job-specific cores with a threaded bottom sub can also be supplied to suit operations requiring equalising prongs and running/pulling probes.
