

Large Bore Isolation Sleeve

Wellvene's Secure Lock Large Bore Isolation Sleeve allows for a significantly increased ID for running wireline tools through or eliminating flow restriction during production operations.

DESCRIPTION

The sleeve can be supplied with an upper and lower seal stack in the form of D-Seals, V-Stack or SwellStack depending on pressure rating requirements and seal bore condition to provide large bore isolation for Tubing Hangers, TRDHSV's and SSD's.

- For TRSSSV Operations, single tool can protect seal bores, hold flapper valve open and isolate control line
- Designed to suit any nipple profile size or type

FEATURES

- Set and retrieved on a standard GS running/pulling tool complete with set verification sub (allows for a check pull to ensure the collet is securely locked within the nipple profile)
- Secure lock collet fingers allow for flowing operations with sleeve set and securely held within profile
- Available with a range of seals to suit seal bore requirements (V-Packings, D-Seals, Swellstack)
- Material spec and pressure rating tailored to suit well conditions and operational requirements
