

## Monobore Anchor Catchers

The Wellvene Monobore Anchor Catcher is a slickline set tool that offers an alternative to setting bridge plugs or junk catchers as valve catchers during gas lift valve change out operations.

### DESCRIPTION

This simpler and more cost-effective option runs on a standard GS running tool. Positioned at the desired setting depth below the gas lift mandrel, up/down manipulation of the toolstring allows the internal J-slot mechanism to function and slips to expand.

The catcher then self-anchors to the tubing wall, and after the gas lift valve is changed out; a standard GS pulling tool can be used to retrieve the catcher or reposition it at an alternative depth without having to remove it from the well.

- Eliminates the use of bridge plugs and junk catchers for gas lift valve operations
- Reduces operational risk, time and cost

### FEATURES

- Simple set and retrieve self-anchoring locking system
- Set and retrieved on industry-standard GS tool
- Designed to suit all tubing sizes and weights
- Can be adapted to suit alternative operational anchoring requirements
