

Position Indicator Tool

The Wellvene Position Indicator Tool is designed and tested specific to the BHA internal profile it is accessing. Used to verify access within BHAs, the Position Indicator Tool can eliminate doubt during complex retrieval operations, and support the setup of Releasable Spears or the design of bespoke retrieval tools.

DESCRIPTION

The tool is run into the assembly or BHA until the no-go ring is tagged. The inner mandrel continues into the assembly or BHA, allowing the ratchet ring to travel up the body until maximum access is achieved.

The ratchet ring can then be measured to confirm the depth of access, allowing for an understanding of the potential restriction and the selection/design of a suitable retrieval tool.

- Confirms depth of access into any assembly or BHA
- Design-engineered to suit the required application such as side pocket mandrels, lock mandrels and bridge plugs
- No special tools are required for disassembling or assembly

FEATURES

- Simple, robust design
- Can be supplied for operations within 2 3/8 tubing up to 9 5/8 casing
- Teflon bottom sub available for impression of restriction/obstruction
- Field redressable
- Provided with any industry connection
- Sale and rental options are available
