

Radial Brush / Debris Catcher

Designed to be incorporated into the Wellvene brush range, the Brush Debris Catcher collects scale/debris from the wellbore to provide samples for remediation analysis and to mitigate further issues deeper in the well caused by loose debris particles.

DESCRIPTION

Our Brush Debris Catcher is a cutting-edge solution designed to improve the effectiveness of well cleaning operations. Engineered to match the operation, this tool sits below the targeted area in the well, integrating seamlessly to capture debris and sediment during the Wireline brushing process.

BENEFITS

- Robust construction for long-lasting performance and reliability
- Secure and efficient mechanism for clearing and capturing debris from key areas within the completion
- Compatible with a wide range of oilfield downhole nipple profiles
- Hassle-free installation and maintenance
