

Standard and HD Releasable Overshots

With its adjustable core, the Wellvene Releasable Overshot has been designed to allow for varying reach configurations when latching onto tools with a damaged or no external fishing neck.

- Multiple configuration options reduce stock and costs
- Adjustable and extended reach
- No special tools are required for disassembling or assembly

FEATURES

- High tensile/yield design
- Full range of sizes available
- Various slip sizes can be utilised within the same tool
- Integrated bell guide
- Field redressable
- Supplied with any industry connection
- Sale and rental options are available

CONFIGURATIONS

Each Overshot comes with a range of interchangeable slip sizes and optional integrated bell guides to allow for use within 2 3/8" tubing up to 9 5/8" casing.

The Releasable Overshot only requires downward jarring to shear the release pin. However, a **Double Jar Down Adaptor (DJDA)** can be supplied where there may be a requirement to eliminate the potential for premature shearing of the tool during prolonged or severe downward jarring when latching onto a fish neck or tool body.

Subsequent upward jarring can also be applied indefinitely or until the tool being retrieved is released. This upward action merely shears the shear pin in the DJDA mechanism to allow the tool to transfer into the pre-release position. Further downward jarring will shear the release pin, allowing retrieval of the Overshot from the fishing neck.

Where extended reach may be required, **Bell Guide Extensions and Slip Extensions** can be supplied.

The Core Adjuster can also be supplied with a thread in the bottom to accommodate equalising prongs and pulling probes.
