

TRSSSV and SSD Jetting Sub

The Wellvene TRSSSV or SSD Jetting Sub provides a very simple yet effective method for combining precision bullhead jetting and chemical soaking across vital components within a TRSSSV or SSD.

DESCRIPTION

Engineered with a single jet sub comprising of an array of micro nozzles, generating a comprehensive 360° jetting pattern, the Jet Sub is strategically positioned within the Sliding Side Door or Safety Valve to allow for the precise delivery of scale dissolver to critical areas where scale buildup may compromise valve functionality.

Configurable scale dissolver volume and operation duration offer precise control, while the tool's user-friendly design eliminates the need for specialised training.

FEATURES

- Dual function for soaking and jetting operations
- Spaced out to align with key TRSSSV components
- Ability to continuously switch between Pump, Soak operations
- Deployed on Slickline, E-Line or Coil Tubing
- No specialised training required
