

The Wireline Toolstring Clamps is a robust solution for securely lifting, lowering, and suspending toolstrings at surface in a safe, controlled manner.

#### DESCRIPTION

Ideally suited to scenarios with restricted rig-up height, this clamp is particularly useful during the deployment or retrieval of flow control devices or lengthy toolstrings. Securely held beneath the toolstring's fish neck, the clamp is locked in place with a secure bolt and independent retention, ensuring the hinged clamp stays firmly closed. This enables the safe suspension, raising, or lowering of the toolstring.

#### TOOL APPLICATIONS

Efficiently lift, lower and suspend toolstrings at surface.

#### FEATURES

- Various sizes to accommodate industry-standard fish necks
- Fully rated lifting eyes positioned to optimise balance and ergonomics
- Treated for enhanced durability
