A WELLVENE DIVISION

COMBINED EXPANDABLE WIRE FINDER SYSTEM

PRODUCT OVERVIEW

The Combined Expandable Wire Finder is designed specifically to locate the top of any sized wire or cable that has been lost in a well.

Supplied c/w an adjustable sub, the Wire Finder can be expanded to suit the required tubing ID and well bore restrictions relevant to the wire or cable being fished, and is available for a range of completion sizes from 2 3/8" tubing up to 9 5/8" casing.

Although it can be run as a standalone Wire Finder, optional assemblies allow it to be configured as a Wire Finder Grab, Wire Finder Spear or Wire Finder Grab c/w Spear. Additionally, it can be supplied suitable for housing various BHA's internally to provide added

protection of the toolstring in cases whereby loose wire or cable may be present at various depths.

The numerous optional interchangeable components ensure stock reduction and cost efficiency across the range.

Job specific Grabs and Spears can be supplied with a varied number of standard or offset barbs to suit specific operational requirements for the retrieval of smaller wire or larger cable including capillary string sizes.

FEATURES BENEFITS

- High tensile / yield design
- Toolstring protection
- Interchangeable and adjustable to minimise cost and maximise inventory
- Reduced operational risk of running through wire
- Size ranges available to suit all tubing grades
- Field redressable
- Supplied with any industry connection
- Sale and rental options available
